## DETAILED ACTION

### ***Claim Rejections - 35 USC § 112***

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 1-5 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In Claim 1, it is unclear what is meant by "of a linearly tapered rectangle" in lines 3-4 and in lines 4-5, "tapered sides of radiation patch". Also, in line 3, "a" should be --an--. Similar problems occur in Claim 3.

In Claim 2, there also is no clear definition of "tapered sides". How do these sides extend?

In the claims, it appears that the term "resonate" should be --resonant--.

### ***Claim Rejections - 35 USC § 103***

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1-5 are rejected under 35 U.S.C. 103(a) as being unpatentable over European Pat. 1146589 (Aoyama et al.).

Regarding Claims 1-5, Aoyama et al. show in Fig. 20(a), a radiation patch of a planar inverted-F antenna 13 having an asymmetrical shape with variable width

and length tapered sides as in a tapered rectangle. The shape and size of the patch determines resonant, operational frequency and bandwidth. These characteristics are well known to those skilled in the antenna art. See column 8, paragraph “[0030]” which discusses the dimensions of the patch, relating to inductance and capacitance and that defines the resonant frequency.

5. The patent to Nagumo et al. (6501425) is cited as of interest showing tapered antenna elements and their effect on frequency of operation.
